

# Expanding To New Lengths

At HYPRESCON we've built a new prestressed concrete girder bridge facility to meet today's demanding road structures.

Our concrete girders combine the compressive strength of concrete and the high tensile strength of steel strands. We can design & produce girders in various sizes ranging from 100m in length to 3m wide.

Since our new facility opened in May 2000, we've supplied engineers and municipalities with over 200 girders for 17 different bridge structures, including the 407 (west extension), Hwy 11 & Hwy 69 road projects.

HYPRESCON has a proven list of products, which include Prestressed Concrete Pressure Pipes, Fittings & HYSpan bridge products, we now add to this list prestressed concrete girders, to help serve you better.

For more information contact our engineering sales department to discuss your next project.
